

Simply awesome.

*A chlorination system
that's rugged, cost-effective,
and easy to use.*

Built upon the proven technology and reliability of the Accu-Tab® system from PPG Industries, the Titan™ GT100 system is a chlorination workhorse.

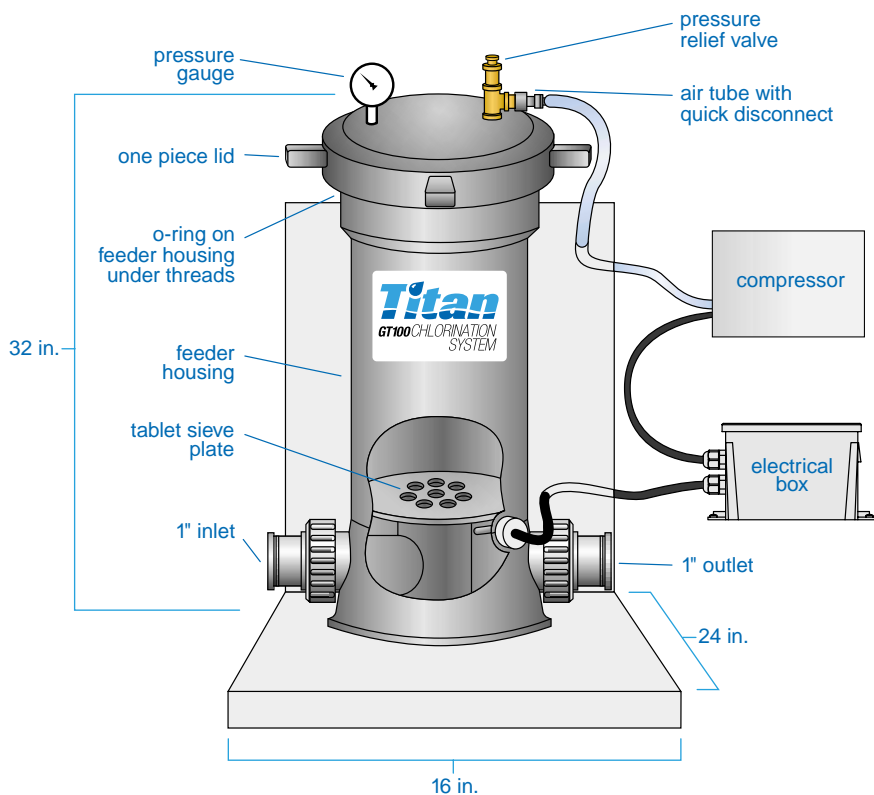

- Outdoor stabilized pools up to 150,000 gallons
- Outdoor non-stabilized pools up to 60,000 gallons
- Indoor pools up to 500,000 gallons

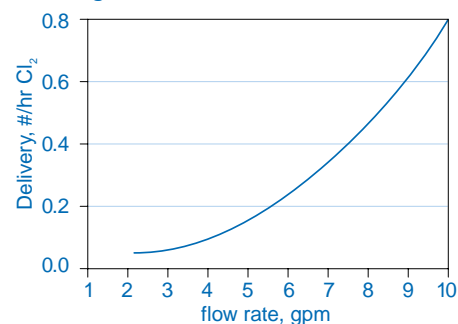

Certified to
NSF/ANSI 50

NSF Delivery Rate for Titan GT100 using Accu-Tab Blue SI tablets

The Titan GT100 Chlorinator is NSF 50 listed for pool and spa applications. Only PPG Accu-Tab Blue SI Tablets for commercial pool applications are permitted for NSF installations. Use of tablets other than Accu-Tab Blue SI will void both the PPG warranty and NSF 50 listed certification

The Titan GT100 Chlorinator

The Titan GT100 uses an air compressor to deliver a consistent amount of chlorine to your pool.

Compact system with big benefits

Measuring just 16 in. x 24 in. the rugged Titan™ GT100 system tackles tough water conditions without denting your budget. Water balance is easy, maintenance is reduced to twice a year in most cases, and the handling, storage, and safety issues of gas and bleach are eliminated.

The GT100 advantage

- Consistent, accurate chlorine delivery
- Low cost
- Minimal maintenance
- NSF 50 certified
- Limited warranty when used with Accu-Tab Blue SI tablets*
- Compact 16 in. by 24 in. footprint
- Simple and safe installation and operation
- Above- or below-grade use
- Rust-proof polypropylene construction
- 30-lb. tablet capacity

How the system works

The Titan GT100 uses a special housing and an air compressor to feed chlorine consistently. Water entering the unit is directed to a sieve plate holding patented Accu-Tab Blue SI (scale inhibitor) erosion tablets. The electronically controlled air compressor turns on as needed to maintain an ideal fixed water level in the feeder. This ensures that only the bottom tablets are wetted; while preventing air from entering the pool.
