

ROSEWOOD COURT DALLAS, TX

Owner: Rosewood Court, L.L.C., Dallas, TX
 Development Manager: Meloncon Consulting, L.L.C., Dallas
 Architect: HKS, Inc., Dallas
 Glass Fabricator: Vitro America, Atlanta, GA
 Glazing Contractor: Oak Cliff Glass & Mirror Co., Dallas
 General Contractor: Hunt Construction Group, Dallas

PPG *IdeaScapes*
 Products: **Solarban**® z50 Glass

PROJECT OVERVIEW:

Located on 12 acres in Dallas' prestigious Uptown neighborhood, *Rosewood Court* is the cornerstone of a mixed-used development containing more than 2,000 residential units, 30,000 square-feet of retail space and 400,000 square-feet of office space.

HKS, Inc., of Dallas designed the 19-story structure in a stark, neoclassical style to complement the two architectural landmarks that flank it. The first, Crescent Office Towers, is a trio of buildings designed by Phillip Johnson and known for their signature mansard roofs and filigreed grillwork. The other is Richard Keating's International Center, a collection of prestigious glass and steel high-rises with office space and exclusive residences.

Rosewood Court takes its cues from these buildings by elegantly mingling classical building proportions with contemporary features and detailing. This is especially evident in the building's façade, which balances the sturdiness of Indiana limestone with a light fretwork of window openings that frame **Solarban** z50 glass by PPG.

Gregory A. Oehlers, national architectural manager for Vitro America, the building's glazing contractor, said he,

Solarban® z50 glass by PPG features a stylish blue-gray tint together with an unparalleled combination of high visible light transmittance and low exterior reflectivity.

development manager Steve Meloncon, and project architect Clifford Horsak, senior vice president, HKS, Inc., selected **Solarban** z50 glass for Rosewood Court after creating full-sized mock-ups of the building with several different types of glass.

Oehlers said **Solarban** z50 glass emerged as "the clear winner" because of its stylish blue-gray tint and unparalleled combination of high visible light transmittance and low exterior reflectance.

“**Solarban** z50 [glass] was hands down the best fit from a color and performance standpoint,” he explained. “There was no doubt in my mind that it would prove to be the product of choice after I viewed the full-sized mock-up. The project architect and developer obviously felt the same.”

Horsak agreed, saying that “through the mock-up and aesthetically [**Solarban** z50 glass] has proven to be a lovely glass.” He added that the glazing was specified for more than just its good looks. He wanted exceptional environmental performance as well.

“Rosewood Court is applying for LEED certification,” Horsak explained. “**Solarban** z50 glass helped us to qualify for LEED points because of its energy efficiency and regional sourcing.”

In a standard one-inch insulating glass unit, **Solarban** z50 glass balances visible light transmittance (VLT) of 51 percent with a solar heat gain coefficient (SHGC) of 0.31. The resulting light to solar gain (LSG) ratio of 1.64 is up to 30 percent better than similarly tinted architectural glasses. **Solarban** z50 glass also had the advantage of being sourced from PPG’s Wichita Falls glass-making facility, about 150 miles northwest of Dallas.

A digital building energy management system, energy-efficient lighting and fresh-air ventilating units providing 95 percent filtered air, are other sustainable building features associated with Rosewood Court.

So far, Horsak reports, the **Solarban** z50 glass has held up its end of the LEED responsibilities. “The glass has been monitored by an outside source and proven to meet our energy expectation standards,” he said.

Even more importantly, thanks to its good looks and prestigious location, Rosewood Court is filling up fast. “We’ve gotten rave reviews from our clients,” Horsak adds. “The building is already 70 percent leased with less than a full year on the market.”

*A fretwork of **Solarban**® z50 glass, framed by Indiana limestone, highlights the façade of Rosewood Court in Dallas' prestigious Uptown neighborhood.*

Vitro America is a member of the PPG Certified Fabricator Program (PPG/CFP), a select group of international glass fabricators trained and audited by PPG to deliver the highest quality glass products and service. To learn more about the PPG Certified Fabricator Program, or to get samples of **Solarban** z50 glass or any PPG architectural glass, call 1-888-PPG-IDEA (774-4332) or visit www.ppgideascales.com.
